Mark,

Attached is Ex. 6 - Personal Privacy testing history.

I was not present for this testing and it was done with citizens that have observed prior testing with us.

Ex. 6 - Personal Privacy and her daughter still report health issues and this home is where I want to take more samples myself today.

One 1 round of testing here but note that the grab samples for in shower were on the high side for chloroform (45 ppb) in Flint testing.

Note non-pathogenic bacteria but high plate counts just as a data point.

Non-detect for lead near water meter.

Best Regards,
